TO THE RIGHT HONOURABLE THE LORDS OF THE COMMITTEE OF HIS MAJESTY'S
MOST HONOURABLE PRIVY COUNCIL FOR TRADE, &c.

MY LORDS,

I HAVE now the honour of laying before your Lordships Part II. of Statistical Tables for the year 1832, being the first of those annual collections which it has been proposed to compile in this department.

It may be proper on this occasion briefly to advert to the contents of this volume, partly for the purpose of explaining the nature of its Tables, but chiefly to point out the means that have been put in progress for extending the range of subjects which it embraces, in order to their being included in the volumes of future years.

The first compilation prepared by this department, and which was presented by his Majesty's command to both Houses of Parliament in the last Session, comprehended a period of twelve years, ending with 1831. That volume was intended to form a groundwork for our future labours, and to supply comparative data for the more detailed statements of succeeding years.

It will be found that this intention is substantially complied with in the following pages; every Table contained in the former volume being, with scarcely an exception, contained in the present compilation. It will be seen, too, that wherever it has been found practicable to go into detail, such a course has been followed, except with regard to the strictly financial operations of the year: Upon that subject, the annual volume presented to Parliament by the Treasury, and which is compiled in pursuance of the Act 42 Geo. III. c. 70, contains ample details of every branch of public income and expenditure; and as that volume is accessible to every Member of the Bodies for whose information this compilation is principally made, it has been felt unnecessary to repeat from it more than one or two short abstracts, showing the actual progress of the Revenue and Expenditure, and the state of the Public Debt. To have added more would have increased the cost of the present volume without attaining any apparently adequate advantage.

The account given in this collection of the quantities of Foreign and Colonial Merchandize Imported and Exported, and which were retained for Consumption, in 1832, contains every particular which Mr. Irving, the Inspector-General of Imports and Exports, has been able to furnish at so early a period after the close of the year. The general statements of Imports and Exports which that

officer has been accustomed to compile, showing the trade carried on with various countries, and which, until the present time, has been the only complete account given of our commercial transactions, in which the quantities of each article of merchandize have been specified, has usually been eighteen months in arrear; and when it is considered how voluminous the accounts must be whence that statement is compiled, it will not appear surprising that a considerable time should be required for its completion. For the same reason, the statement now furnished cannot afford any particulars with regard to the countries whence the different goods have been received, or to which they have been exported. It will, however, be satisfactory to learn, that as one of the fruits of the new arrangements ably and zealously made by the Inspector-General of Imports, in order to meet the wishes of your Lordships for obtaining early information upon such important topics, he will hereafter be able, within six or seven months from the close of each year, to furnish a complete account of Imports and Exports for the past year, showing the trade with various countries under separate heads, and presenting under each head a specification of all the principal articles imported from and exported to each particular country.

An account of Imports, Exports, and Consumption, similar to the one now presented, which does not contain the particulars just specified, will be completed by the end of January in each year, the materials for it being contained in monthly returns transmitted to this department from the Custom House, and which are regularly received by the twenty-fifth day after the expiration of each month.

The statements now given of the receipts of the other departments engaged in the collection of the Revenue, are made out according to forms prepared in this office, with the intention of giving in detail every possible information connected with the subject. The number or quantity of each article upon which duties have been collected, will be found in these Tables, as well as the amount of duty received, in as complete a form as the records of the different offices have allowed.

The altered conditions under which the Charter of the East India Company has lately been renewed, occasions every circumstance connected with the trade of India and China to be viewed with peculiar interest at this time; for which reason some further statements have been adopted from the Reports and Returns presented during the last Session, which exhibit the course of that trade for a series of years, and which it is thought will be useful to commercial men.

It may on the other hand be noticed, that not any continuation of the Colonial Abstracts which appeared in the First Part of these Tables, is continued in the present compilation. This circumstance would, perhaps, be sufficiently accounted for by stating that the Returns for 1832 corresponding with those from which our former Abstracts were made, are not as yet all received at the Colonial Office; but it has been felt that those Returns as at present transmitted

are not altogether suited to our purpose. Active steps have been taken for remedying all deficiencies on this head in our future collections. A department in the Treasury has been charged with the task of procuring from each of our Colonies detailed statements concerning its Revenue and Expenditure, and measures have been adopted by the Inspector-General of Imports for the establishment of a systematic Record of the Commerce of the Colonies, comprising not only their intercourse with the Mother Country, but the Trade which they carry on with Foreign States—a Trade of great and growing importance, but of which no account has hitherto been kept. The record here announced will take date from the commencement of the year 1832. Being founded upon numerous Returns, collected from distant possessions, it will necessarily be always in arrear, and even when the arrangements recently made shall have been brought into full operation, that arrear can hardly be less than twelve months. The Inspector-General of Imports and Exports, under whose direction these Returns will be registered, gives reason to expect that an account for the year ending 5th January, 1833, showing the trade of each of the Colonies in all the principal Articles of Commerce, will be completed early in the spring of 1834, after which time the needful Returns will be made in regular succession.

There are many subjects which it will be necessary to include in these volumes, before they can be considered complete as a collection of Statistics. As to some of these subjects, it will be hardly possible to embrace them without the assistance of Parliament in creating the necessary machinery. This remark applies with peculiar force to the subject of population. The several inquiries made on this important question have hitherto been set on foot at the considerable interval of ten years, a circumstance alone sufficient to cause discrepancies and errors, since the inquiries must in many, it might be said in most cases, be conducted each time by a different set of functionaries, who will be without experience to guide them in a matter which peculiarly calls for a systematic method of proceeding. The arrangement of the Returns made under the Population Acts has, it is true, been confided to a gentleman, whose talents and tastes eminently qualify him for the execution of the task; but it must be manifestly impossible for any intelligence to remedy errors and incongruities which have been allowed to accompany any subject from its inception, and a course very different from that hitherto pursued will be necessary before the perfecting of this leading branch of statistical research can be satisfactorily accomplished.

The Commissioners appointed for inquiring into the administration and operation of the Poor Laws, have set on foot many inquiries that bear upon the moral and physical condition of the people, and so soon as the answers to those inquiries shall have been collected together and arranged, the information they contain will be made available to our purpose. A like expectation may be entertained with reference to the labours of the Commissioners appointed to inquire into the condition of children employed in factories, a body of information

having been obtained by those gentlemen, which will throw much light upon the general circumstances of a numerous class of our fellow-subjects.

It appears highly desirable, and even necessary, to the proper understanding of the common interests and condition of the country, that its Government should be possessed of accurate information as to the actual and comparative produce of the soil, together with many other points of rural economy scarcely less important, and a great deal of anxious consideration has been given in order to arrange some plan for systematically acquiring that information. The difficulties which stand in the way of accomplishing this most desirable object have, however, been found so great, that no progress has hitherto been made with regard to it. There exists no class of public functionaries in this country qualified to institute such an inquiry, and it can hardly be hoped that private individuals will be found in every part of the kingdom willing to undergo the labour necessary for its satisfactory performance. It is of so much consequence, however, to acquire information upon this class of subjects, that the most strenuous efforts should be made for the purpose, and no exertions which I can give shall be wanting to that end; but further experience has confirmed me in the opinion which I formerly took occasion to offer to your Lordships, that such a work requires a considerable time for its accomplishment, and that it is necessary to awaken the public mind to a just appreciation of the advantages of possessing accurate and extensive statistical knowledge, in order to our obtaining the co-operation of men of experience and intelligence, without which it is vain to expect any considerable portion of success.

It is gratifying to know that this effect, which was only expected to follow the publication of several of our compilations, has already commenced; that the volume presented to Parliament during the last Session has excited a very great degree of interest, particularly among commercial men; and that associations are in the course of being formed, the labours of which will come importantly in aid of the exertions of this department.

I have the honour to be,

My Lords,

Your Lordships' most obedient

and very humble Servant,

G. R. PORTER.
